Overview

ABSTRACT

Los objetivos de la Encuesta Nacional de Hogares sobre Medición de Nivel de Vida (EMNV) son:

- Obtener la información necesaria para la elaboración del agregado de consumo, que, como medida de bienestar, permita la construcción de líneas de pobreza para la clasificación de los hogares según su condición de pobreza, comparable con la EMNV 2009.
- Conocer el porcentaje de la población que se encuentra en situación de pobreza general y pobreza extrema en cada dominio de estudio.
- Conocer la distribución nacional de los pobres generales y pobres extremos entre los dominios de estudio.
- Medir la desigualdad en el consumo y la desigualdad en el ingreso por dominio de estudio.
- Disponer de las variables necesarias para la construcción de otras medidas de bienestar tales como: Necesidades Básicas Insatisfechas (NBI) y Agregado del Ingreso.

KIND OF DATA

Sample survey data [ssd]

UNITS OF ANALYSIS

La encuesta tiene las siguientes unidades de análisis: Hogares e Individuos.

Scope

NOTES

El alcance de la EMNV incluye:

Sección 1. Características de la vivienda

- Parte A. Características de la vivienda (Solo para el hogar principal)
- Parte B. Características y gastos del hogar – Para todos los hogares
- Parte C. Programa Sociales
- Parte D. Tenencia de la Propiedad

Sección 2. Características y composición del hogar

Sección 3. Salud

- Parte A. Presencia de enfermedades y gastos para el cuidado de la salud

- Parte B. Gastos del embarazo y parto

Sección 4. Educación

- Parte A. Asistencia preescolar, CDI y comedor infantil

- Parte B. Escolaridad

- Parte C. Cursos Y/O capacitación

Sección 5. Actividad Económica

- Parte A. Actividades de las personas de 10 años y más

- Parte B. Primer trabajo de la semana pasada

- Parte C. Segundo trabajo de la semana pasada

- Parte D. Trabajo de los últimos 12 meses

- Parte E. Actividades Independientes/ Negocios familiares fuera del sector agrícola

Sección 6. Migración

- Parte A. Migración Interna

- Parte B. Emigración Internacional

Sección 7. Gastos y otros ingresos del hogar

- Parte A. Gastos en alimentos, bebidas y tabaco en los últimos 15 días

- Parte B. Gastos en artículos no alimenticios

- Parte C. Otros ingresos del hogar

- Parte D. Equipamiento del hogar

Sección 8. Actividades agropecuarias como trabajo independiente

- Parte A. Datos de la unidad de producción agropecuaria

- Parte B. Actividad Agrícola

- Parte C. Actividad Pecuaria

- Parte D. Productos y subproductos de origen agrícola Y/O pecuario

- Parte E. Fuerza de trabajo

- Parte F. Gastos, equipos e instalaciones agropecuarias y forestales

- Parte G. Producción Forestal

- Parte H. Producción Agrícola de patio

- Parte I. Producción pecuaria de patio

- Parte J. Productos y subproductos de la producción de patio

Sampling

Sampling Procedure

- Marco Muestral

La EMNV 2014, se basa en la actualización cartográfica realizada en el 2004 para el levantamiento del Censo de Población y Vivienda del 2005. Para su levantamiento, el país fue dividido en segmentos censales conteniendo cada uno, aproximadamente, 150 viviendas en el área urbana y 120 en el área rural.

- Diseño y Tamaño de Muestra

Selección de una muestra probabilística de viviendas, en dos etapas, con estratificación de las unidades de primera etapa (segmentos censales). El número total de viviendas en la muestra fue 7570.

Deviations from Sample Design

Variable de diseño fue la tasa de pobreza extrema, según EMNV 2009. De acuerdo al diseño muestral seleccionado y manteniendo la comparabilidad de las encuestas de años anteriores, la EMNV 2014 tiene representación nacional, urbano-rural y por macro-regiones. Selección de una muestra probabilística de viviendas, en dos etapas, con estratificación de las unidades de primera etapa (segmentos censales).

Distribución de la muestra de UPM'S y viviendas, según marco región/dominio de estudio, EMNV 2014

Marco Region/Dominio UPM'S Total de Viviendas

Managua	315 3,150
Pacífico	170 1,700
Central	166 1,660

Questionnaires

Overview

Se utilizaron dos formularios: el de hogar y el de precios. El cuestionario de hogares es multitemático, pre codificado y contiene 8 secciones con base a los temas que aborda. En él se recopila toda la información necesaria para la construcción del agregado de consumo alimentario y no alimentario, líneas de pobreza (general y extrema) y el agregado de ingreso, sin necesidad de recurrir a fuentes externas.

Data Collection Notes

Recolección de Información: Esta tiene las siguientes características:

- El levantamiento del formulario de hogares y de precios se realizó de manera simultánea, con una misma programación de campo.
- El cuestionario de hogares se levantó en una sola ronda de visitas a la vivienda.
- En los casos en donde en la primera visita no se obtuvo la información total, se realizaron visitas posteriores.
- El levantamiento de la información se llevó a cabo de forma simultánea en todas las macro regiones del país.
- En todas las etapas, se realizó supervisión y monitoreo de forma rigurosa y permanente del proceso por parte del equipo técnico de la encuesta.
- El formulario de precios fue aplicado en los lugares o establecimientos donde los hogares declararon que realizaban sus compras.

Questionnaires

Se utilizaron dos formularios: el de hogar y el de precios. El cuestionario de hogares es multitemático, pre codificado y contiene 8 secciones con base a los temas que aborda. En él se recopila toda la información necesaria para la construcción del agregado de consumo alimentario y no alimentario, líneas de pobreza (general y extrema) y el agregado de ingreso, sin necesidad de recurrir a fuentes externas.

Data Processing

Data Editing

Los datos fueron ingresados directamente al computador, en sedes regionales ubicadas en diferentes departamentos del país, en donde se realizó una doble digitación del 100 % del formulario de hogares, lo cual garantizó la identificación y corrección inmediata de errores de digitación.

Other Processing

En el proceso de medición de la pobreza suelen reconocerse al menos dos etapas: i) la identificación de las personas pobres y ii) la agregación de la pobreza en una medida sintética. El primer proceso, descrito consiste en identificar a la población cuyo consumo por habitante es inferior al costo de una canasta de satisfactores básicos. En la segunda etapa se dimensiona la pobreza mediante indicadores sintéticos que permitan cuantificar el volumen de pobreza y algunas características adicionales a la población objeto de estudio.

En el proceso de construcción de esta medida, se valorizan estos componentes con precios que provienen principalmente de los cuestionarios levantados en los hogares seleccionados, luego se construyen índices de precios geográficos para ajustar las diferencias de costos entre las diferentes regiones (dominios de estudio) y finalmente se utiliza la información sobre los miembros del hogar para convertir el nivel de consumo del hogar (recolectado en la encuesta) a una medida de bienestar individual (per capita), tomando en cuenta el tamaño y la composición del mismo.

Data Appraisal

Other forms of Data Appraisal

El control de calidad se realizó en tres etapas:

- i) la primera en campo, en forma manual, a cargo del crítico-codificador;
- ii) la segunda fue sistematizada a través de un programa de inconsistencias que detecta errores y omisiones a nivel de hogares;
- iii) la tercera a través de la revisión de frecuencias y cruces de variables relacionadas, aplicada a toda la base de datos.
